

Assess. Categorize. Prioritize. All on a Single Dashboard.

Your organization is increasingly dependent on vendors and supply chain partners. That dependence carries an element of risk. Your partners and even your partner's partners can give criminals a backdoor to your most valuable assets.

Why You Need Centraleyes

Eliminate Complexity

Tracking multiple vendors and their partners at scale is infeasible using manual or legacy solutions. Leverage Centraleyes automated vendor questionnaires and analysis to assess hundreds of vendors and prioritize with ease.

Accurately Quantify Risk

Traditional risk management provides a snapshot in time, which is insufficient for today's dynamic supply chain risk. The Centraleyes platform provides comprehensive visibility into your vendor risk management posture so you can assess and quantify vendors over time for an ongoing accurate picture and real metrics.

Regain Focus

Overworked security teams can't effectively assess vendors or see the full picture. With Centraleyes, you'll be able to streamline the data collection process and automate the analysis process for vendor risk, allowing your team to focus on making decisions and working with vendors to mitigate gaps.

Improve Vendor Relations

Legacy vetting and onboarding processes can take weeks or months, adding strain to the vendor relationship. Centraleyes cuts the complexity with collaborative smart questionnaires, easily shared amongst the vendor's team for maximum collaboration. Instant visual analysis allows companies to respond to vendors quickly and even offer remediation steps to close security gaps.

What Can You Do With Centraleyes?

Manage vendor risk through a centralized dashboard.

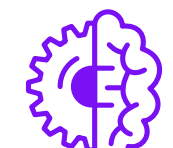

Onboard vendors in thirty seconds or less.

Orchestrate collection and management of data in a single location.

Assess, categorize, and prioritize hundreds of vendors.

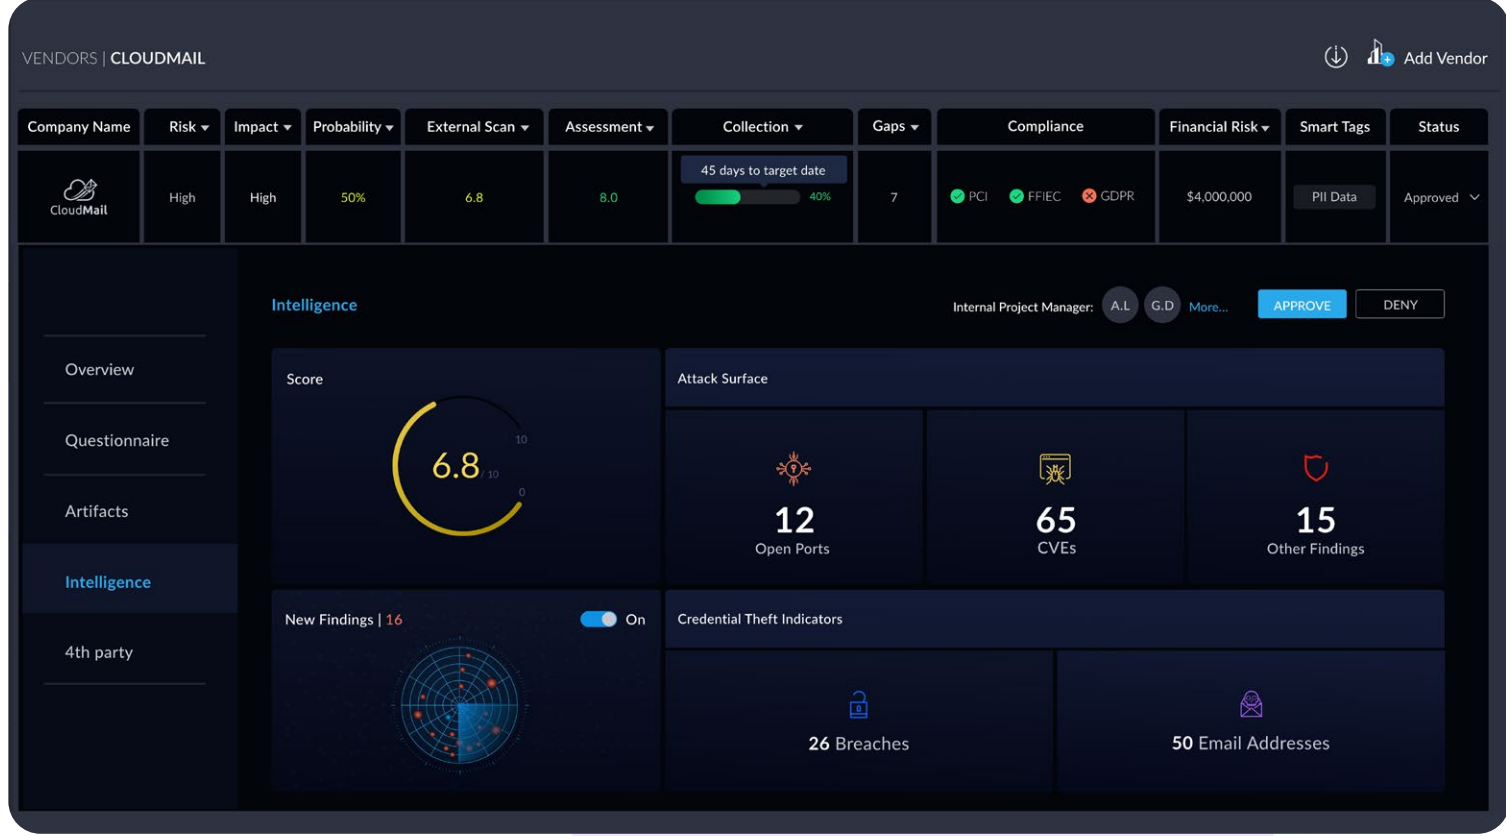

Use AI guidance for faster remediation.

Leverage cutting-edge reports and visualization.

Monitor your entire ecosystem in real-time.

Identify high-risk vendors through a hybrid approach, combining qualitative and quantitative risk analysis techniques for greatly improved accuracy.

Save time and resources via automated workflows.

Empower vendors to improve security and remediate gaps.
