Risk Management Reimagined

1st Party
Internal Risk and Compliance

Overview

Organizations in every industry are affected by the growing number of cyber attacks and their complexity, which continue to increase year over year. Cyber risk management is critical in protecting organizations from the reputational and financial damage that can be incurred following a breach. Proper cyber defense can only be achieved by understanding, quantifying, and mitigating internal risk, while ensuring compliance with all relevant standards and regulations. Outdated solutions like spreadsheets and GRC systems are not efficient in achieving this goal and make it very difficult for teams to do their jobs effectively to protect their organizations.

What We Offer

Centraleyes is a cloud-based platform that reimagines cyber risk management and helps organizations achieve and sustain cyber resilience and compliance.

The platform saves time and resources while creating a far more resilient cyber risk and compliance program. With Centraleyes, cyber risk teams can manage all of their assessments and reports across multiple environments, groups and locations, in one centralized and comprehensive platform. The platform provides pre-populated, easy-to-manage questionnaires and surveys, integrations into security tools, and pulls in external threat intelligence and data feeds. The platform enables streamlined and simple distribution and collection of all necessary data, while automatically analyzing results using the most advanced risk methodologies that exist.

The organization has the ability to choose from tens of pre-populated integrated risk and compliance frameworks such as NIST, ISO 27001, PCI, FFIEC, GLBA and more, and can create and define additional frameworks to fit its specific needs and use cases.
The platform's advanced infrastructure allows for maximum flexibility in configuration, and no customizations are needed at all, cutting down deployment and implementation times by 90%.

Once the data is collected, it is then automatically presented on cutting edge dashboards which quantify and visualize the cyber risk and compliance levels. The data is also presented on an AI, automated remediation planner that creates and prioritizes remediation tickets, making it easy to run various automated workflows to close the gaps. This enables leaders to easily interpret the current status and take action.The ability to go from the strategic "birds eye" view of the organization all the way down to the single control, while tracking all workflows and processes is now at your fingertips.
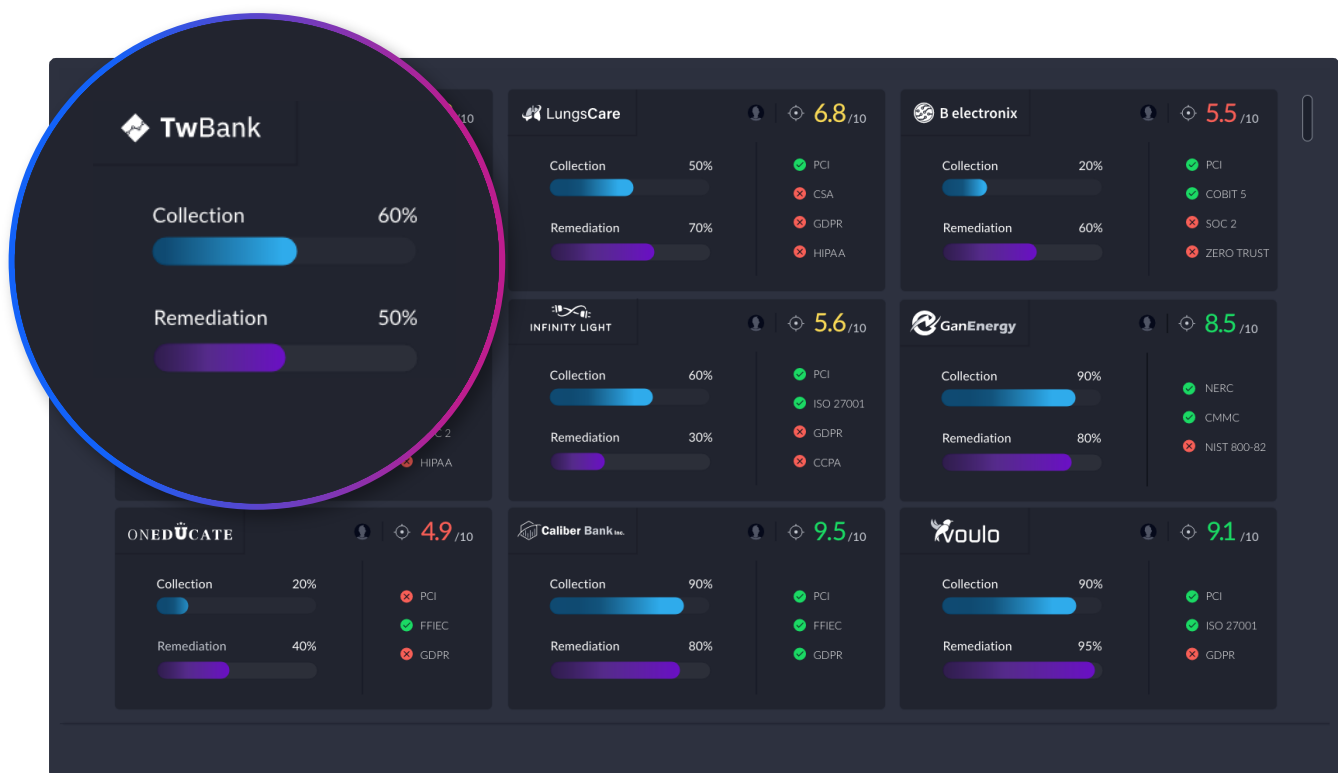

Why Us?

Centraleyes is a cutting-edge, next-generation, integrated cyber risk management platform designed to address today's ever-changing global cyber threats. Centraleyes has a state-of-the-art risk engine which both benchmarks and grades cyber posture and maturity baseline, and allows clients to track and improve cyber defenses in a clear and measurable way, while addressing privacy and compliance requirements.

Centraleyes' solutions integrate with data from surveys, APIs, and live threat intelligence from the public web and darknet. The solution provides valuable insights in a visual and easy-to-understand dashboard. This Integrated Risk Management (IRM) platform simplifies risk management by streamlining data collection, automating scoring and weighting analysis, using a proprietary risk engine that creates automated remediation tickets. The platform's reporting capabilities are truly revolutionary, providing compelling visual reports that are easy to understand and take action with. Centraleyes' dedicated remediation center allows organizations to focus and prioritize on what they need to improve in their risk and compliance programs.

Centraleyes provides everything an organization needs to manage their cyber risk and compliance in one single platform.
